

# PIVOT

PIVOT series represents a top priority that Golden Dragon offers elaborately with multiple iterations for the global market.

PIVOT design in monocoque body structure, stainless steel and lightweight technology to ensure a significant rise in its service life, efficiency of operation and resistance to corrosion.

Constructed with a higher standard than the UN ECE R29, the cab provides the maximum protection from collisions. Moreover, the bus boasts the independent temperature control systems in several zones to make drivers more comfortable. An intelligent remote preheating system (model: VDV2661) offers the prior warm-up of the vehicle without any extra high-voltage battery power consumption. All these merely represent a part of our improvements, but I believe that PIVOT is more a window of flowing urban landscapes than a bus to provide a warm-hearted bond of every corner of cities.

More than 400 PIVOT BEVs have seen the sustained and stable operation in 25 cities of eight EU countries including Norway, Denmark, Sweden and Bulgaria, with the accumulated operating mileage of over 350 thousand kilometers per unit. With a regional span from the cold Northern Europe to the climatically changeable Eastern Europe, these figures have shown the excellent adaptability and reliability of BEVs.
